

BAKSNAP™

Retractable Safety Syringe

Build a better mousetrap and the world will beat a path to your door.

So goes the old saying. Finally there is a choice in safety syringes. One that health care professionals will find easy to use, clear, precise and safe. One that administrators will find amazingly more affordable. Change is good...when you make the switch to BakSnap™ by DuoProSS™.

Look at how BakSnap™ can improve your injection procedures:

- Sharps waste is dramatically reduced, saving money on expensive biomedical containment processing.
- Residual fluids are always removed in the injection stroke.
- Concerns over criminal re-use are eliminated because the plunger is snapped off...the needle safely harbored in the barrel.
- Reliable and consistent in both the dispensing of medicine and the drawing of blood.
- Clear, precisely calibrated barrels help to ensure precision in ultra-low volume dispensing applications.
- Materials are latex-free, non-toxic and non-pyrogenic.
- Siliconized gasket permits smooth, consistent plunger motion.
- Positive plunger-stop eliminates danger of spillage or contamination when drawing.

"The doors of wisdom are never shut."

Benjamin Franklin
